New Contractor™ & FTx™ Guns

Exclusive New FlexSeal™ Design

Introducing breakthrough needle design technology that protects the needle from paint, preventing wear and gun spitting – making the New Contractor and FTx Guns our longest lasting, most reliable guns! You'll get the maximum performance, reliability and comfort that you've come to expect from Graco.

Exclusive FlexSeal™ Totally Enclosed Needle Design (patent-pending)

- Revolutionary needle design has no exposure to paint resulting in 70% longer life!
- Fluid pressure in the gun pushes on the FlexSeal to quickly shut-off needle.
- Needle is completely enclosed – paint no longer contacts the needle, reducing wear.

Consistent Needle Shut-Off

- Spring is outside of the fluid path to eliminate pack out and slow needle shut-off.

Ergonomic Gun Handle

- New Contractor gun's form-fitted handle maximizes operator control and comfort.

Reduced Gun Spitting

- Seat has been re-positioned closer to the tip, 60% "dead space" eliminated.
- Reduced amount of paint left between needle and tip for less spitting on next trigger pull.
- FlexSeal ensures quick shut-off.

Durable Nickel Finish

- Premium nickel finish is corrosion resistant and easier to clean.

GRACO VS OTHER INDUSTRY-STANDARD NEEDLE DESIGNS

Graco's FlexSeal Totally Enclosed Needle Design

Needle is completely enclosed by the FlexSeal to provide consistent and quick shut-off, reducing spitting.

Other Industry Standard Gun Needle Designs

Paint flows directly on needle that moves in and out of a static seal – resulting in needle wear with every trigger pull.

Introducing the new, innovative Contractor and FTx Guns from Graco. Designed to be the longest-lasting guns on the market and continue to be the #1 choice of painting contractors!

Exclusive New FlexSeal Design

- Totally enclosed needle design (patent pending) eliminates exposure to fluid and extends needle life by 70%
- Fluid pushes on seal to quickly shut-off needle and reduce spitting
- Spring located outside fluid path for less fluid restriction and better flow

Modular Needle Cartridge

- Easiest gun to service on the market
- Simply remove trigger cross pin and unthread front housing to change out needle

Ergonomic Contractor Gun Handle

- Form-fit handle provides maximum control and comfort while spraying
- Overall weight is lighter than other airless guns on the market, reducing operator fatigue

New Trigger Lock & Gun Trigger

- Smooth, lightweight trigger pull with simple, thumb-engaged safety lock
- Contractor 2-finger trigger provides more control of the gun while spraying

New Detachable Trigger Guard

- Detaches from bottom and swings clear of gun handle for easy access to gun filter

Easy Out™ Gun Filter

- Filters from the inside out to prevent filter from collapsing
- Interchangeable with Contractor II & FTx II Guns

New EasyGlide™ Swivel

- Exclusive dual-seal swivel design reduces sealing friction under pressure, making this the best swivel on the market!

Choosing the right equipment for your business is essential.

Choosing a quality tip will determine the quality of your finish and help you save a significant amount of time and money.

Each Graco tip is 100% tested for flow rate to meet the tough standards of painting contractors. These careful processes ensure you of the quality you've come to expect from Graco.

Graco Tips Are Easy To Identify

For example: RAC X LTX-517

1. The first three digits (LTX) are Graco's identification numbers which differentiate various tip styles. An LTX is a Graco RAC X SwitchTip. The second three digits (517) represent the actual tip size (fan and orifice).
2. The number (5), when doubled, indicates approximate fan width when spraying 12 inches (305 mm) from the surface. The fan width on a 517 tip is approximately 10 to 12 inches (254 mm to 305 mm). All Graco tips are tested 12 inches (305 mm) from the surface with the same test material, at the same spraying pressure (LL5 at 6 inches). Different materials and spraying pressures may slightly change the width of your actual fan pattern.
3. The last two digits (17) indicate the tip has a hole size of 0.017 of an inch (0.43 mm). The hole size is directly related to the amount of paint that will flow through the tip. Your actual flow rate will depend on your spraying pressure and the paint you are using (high pressure equals more flow; heavier paints equal less flow).

The 517 indicates the tip size:

- The fan size is double the first digit (5), or 10 inches.
- The orifice size is (17) thousandths of an inch, or .017.

Worn Tips Cost Time and Money

- A worn tip uses 25% more paint
- Produces uneven coverage and inconsistent mil build
- Reduces production – requires 20% more passes
- Results in a poor quality finish

Some Quick Rules On Selecting Tip Sizes

- Use smaller orifice sizes when applying lower viscosity materials such as stains and lacquers
- Use larger orifice sizes for heavier viscosity coatings such as latexes or oil bases

Tip Wear Chart

If a contractor is using a worn tip, on average he will spray 25% additional paint and use an additional 20% of labor.

MATERIALS TO BE SPRAYED	RECOMMENDED TIP SIZES
Oil Base Stains, Lacquers and Clear Coats*	0.009 - 0.013
Oil Base Enamels, Industrial Enamels	0.013 - 0.015
Latex Paint	0.015 - 0.019
Heavy Latex and Smooth Elastometrics	0.021 - 0.025
Elastometrics and Block Fillers	0.025 - 0.039

Chart is a guide - actual tip sizes used will vary depending on material

3300 psi (227 bar, 22.7 MPa) maximum working pressure rated at 180° F (82.2° C) temperature

Available in a wide variety of lengths and diameters.

Whip Hose provides more flexibility and increased operator control at the gun (238358).

To maximize performance, choose BlueMax II high performance airless hose. With superior flexibility and durability, BlueMax II is designed to ensure you get the best results from your airless sprayer.

Feel the Difference

Lighter Weight

- Over 10% lighter weight and increased hose flexibility improves usability while spraying under pressure

Highest Safety Standards

- Conductive core meets the highest worldwide safety standards unlike competitive ground wire hose designs

Minimal Hose Coil Memory

- BlueMax II Hose has superior flexibility and reduced coil memory providing ease of use during coiling and uncoiling

Corrosion Resistant

- Plated spring guards are more corrosion resistant

Selecting the best diameter hose to meet your length requirements is critical to good spraying pressure. The larger the hose diameter, the greater the pressure at the gun. As you go down in hose diameter size or increase the hose length, there will be less pressure at the gun.

When coupling hoses together, connect the larger diameter hose to the sprayer and the smaller diameter hose to the gun inlet for maximum pressure when spraying.

3/16" (4.8 mm) Airless Hose

- Small diameter hose ideal for interior pressure rolling or low pressure applications
- Diameter used as a whip hose for improved flexibility at the gun

1/4" (6.4 mm) Airless Hose

- Most commonly sold hose diameter – for all applications

3/8" (9.5 mm) Airless Hose

- High production hose provides best performance at the gun
- Able to handle heavier material and longer hose length with the least amount of pressure drop
